APLICACIONES MOVILES TAREA 4.2

main.dart

```
import 'package:flutter/material.dart';
//aquí empieza la parte que he editado
void main(){
 runApp(
    MaterialApp(
     title: 'Mi primera aplicación',
     home: Scaffold(
      appBar: AppBar(
        title: Center(
         child: Text ('Perfil de Usuario'),
       ),
      body: Center(
        child: Text ('Carmen María Velasco Acosta'),
      floatingActionButton: FloatingActionButton(
       child: <a href="mailto:lcons.beach_access">lcon(lcons.beach_access)</a>,
        onPressed: (){},
     ),
 );
//aquí termina la parte que he editado
class MyApp extends StatelessWidget {
 // This widget is the root of your application.
 @override
 Widget <a href="build">build</a> (BuildContext context) {
  return MaterialApp(
    title: 'Flutter Demo',
    theme: ThemeData(
     // This is the theme of your application.
     // Try running your application with "flutter run". You'll see the
     // application has a blue toolbar. Then, without quitting the app, try
     // changing the primarySwatch below to Colors.green and then invoke
     // "hot reload" (press "r" in the console where you ran "flutter run",
     // or simply save your changes to "hot reload" in a Flutter IDE).
     // Notice that the counter didn't reset back to zero; the application
     // is not restarted.
     primarySwatch: Colors.blue,
    home: MyHomePage(title: 'Flutter Demo Home Page'),
  );

```

```
// This widget is the home page of your application. It is stateful, meaning
 // that it has a State object (defined below) that contains fields that affect
 // how it looks.
 // This class is the configuration for the state. It holds the values (in this
 // case the title) provided by the parent (in this case the App widget) and
 // used by the build method of the State. Fields in a Widget subclass are
 // always marked "final".
 final String title;
 @override
_MyHomePageState createState() => _MyHomePageState();
class MyHomePageState extends State<MyHomePage> {
 int counter = 0;
 void incrementCounter() {
  setState(() {
   // This call to setState tells the Flutter framework that something has
   // changed in this State, which causes it to rerun the build method below
   // so that the display can reflect the updated values. If we changed
   // counter without calling setState(), then the build method would not be
   // called again, and so nothing would appear to happen.
    counter++;
  });
 @override
 Widget build(BuildContext context) {
  // This method is rerun every time setState is called, for instance as done
  // by the incrementCounter method above.
  // The Flutter framework has been optimized to make rerunning build methods
  // fast, so that you can just rebuild anything that needs updating rather
  // than having to individually change instances of widgets.
  return Scaffold(
   appBar: AppBar(
    // Here we take the value from the MyHomePage object that was created by
    // the App.build method, and use it to set our appbar title.
    title: Text(widget.title),
   body: Center(
    // Center is a layout widget. It takes a single child and positions it
    // in the middle of the parent.
     child: Column(
     // Column is also a layout widget. It takes a list of children and
      // arranges them vertically. By default, it sizes itself to fit its
      // children horizontally, and tries to be as tall as its parent.
      // Invoke "debug painting" (press "p" in the console, choose the
      // "Toggle Debug Paint" action from the Flutter Inspector in Android
      // Studio, or the "Toggle Debug Paint" command in Visual Studio Code)
      // to see the wireframe for each widget.
      //
```

```
// Column has various properties to control how it sizes itself and
     // how it positions its children. Here we use mainAxisAlignment to
     // center the children vertically; the main axis here is the vertical
     // axis because Columns are vertical (the cross axis would be
     // horizontal).
     mainAxisAlignment: MainAxisAlignment.center,
     children: <Widget>[
      Text(
       'You have pushed the button this many times:',
      ),
      Text(
